Introduction

This publication sets out a Fundamentals overview of the living standard in the Czech Republic in the years 1993 – 2015 (for the duration of the independent Czech Republic).

The publication uses the data of the **Czech Statistical Office** (CZSO), the **Czech National Bank** (CNB) and the **Ministry of Labour and Social Affairs** (MLSA).

Incomes and Expenditures of Households are well-documented by data of Household Budget Survey (concrete types of households) and **Household Budget Survey** (sector of households – macro).

Household Budget Survey: listed in the tables are data from the sample survey of household budgets (respondents) and National Budget Survey (sector of households – macro).

Household Budget Survey: listed in the tables are data from the sample survey of household budgets. Households (respondents) included in household budget statistics are sampled by the method of purposive quota sampling. Measured were the social groups of **employees** (person having a contract of employment, who do manual work in the area of production, transport, services, etc., or intellectual work at all levels such as managerial, conceptual and scientific, operational, technical, services, etc.), **self-employed persons** (persons having no contract of employment, but are engaged in business except for agriculture), work freelance or work for fees, **farmers** (persons who are engaged in agricultural production and are either members of and work for an agricultural cooperative or are engaged in agricultural production in enterprises of any kind or are self-employed in agriculture production – only in the years 1993 – 2005), **pensioners** (without EA members). Supplementary sample comprises families with children, living just at subsistence level. Unemployed are not included.

Net household income defined for the sake of quota sampling **is calculated as gross income less the total of income taxes and compulsory health and social insurance contributions**. Loan, credits, and withdrawals of savings are not included.

Structure of household incomes included incomes from employment, social and other.

Gross money expenditure is net of deposits, cash-free paid up loans, paid and credits and borrowings. Net money expenditure differs from gross expenditure by health and social insurance payments and income tax. They are broken down into consumption expenditure and expenditure nonclassified as consumption expenditure.

Since 1999 for classification of consumption expenditure in the HBS the CZ-COICOP “classification of individual consumption by purpose” has been used. The classification is of three levels, it has 12 divisions.

All data of Household Budget Survey are per-capita calculations, if you need results for household in total, you can use table in the end of this text.

As the complement of income characteristics are in the table 4 stated basic data about incomes, expenditures and deposits of **households sector** (by National Accounts for Households Sector).

The characteristics of wage development were elaborated on the basis of the Czech Statistical Office (CZSO) data. The main stress regarding publishing the average wage was laid since January 1st 09 on the so called Full-Time Equivalent (FTE) of employees (previously physical persons) in the whole national economy (taking into account the duration of work loads of employees). When processing data, the CZSO applies the mathematical and statistical methods for nonresponse and assessments of non-surveyed part of business sphere and non-profit-making organisations by simultaneous use of administrative data (the so-called average gross monthly wage for the whole national economy comprises data of all

employees). The other important methodical change implemented by the CZSO has been the elaboration and publishing of data concerning average wages according to the Branch Classification of Economic Activities CZ-NACE (national version NACE Rev. 2), that replaced the CZ-NACE (national version NACE Rev.1.1). The data upon the average gross month wage taking into account the methodical change in survey mentioned above have been available only since the year 2000. The data of separate regions have been obtained until 2010 by so-called company method, i. e. according to the seat of the embodied economic entities. As a result, it does not need to reflect fully the real situation in the specific territory. Since 2011, the data in territorial classification are processed according to the seat of current workplace of employees (by so-called workplace method). Some differences between data published in this publication and data mentioned by CZSO arise from different methodology used for setting the time series and for recording data for current period.

To ensure international comparability of the statistical indicators, the items of **money expenditure** were re-arranged to comply with the national version of the international Classification of Individual Consumption by Purpose (CZ-COICOP). The coverage of the items of the expenditures is evident from their names. In expenditure item named "miscellaneous goods and services" is personal care, things for personal use and accessories, social care expenditure, all type of insurance, financial services, etc.

Trends in **consumer prices** are measured on consumer baskets based on a set of selected kinds of goods and services paid for by population. Goods and services which have a significant share in the expenditure of households are chosen to be price representatives. The current consumer basket includes about 729 particular goods and services (representatives) which are split into 12 divisions according to the national classification CZ-COICOP based on the international Classification of Individual Consumption by Purpose. The base period weights for the calculation of group and aggregate indices are derived from the structure of household expenditure derived from Household Budgets Statistics.

Harmonized indices of consumer prices (HICP) came into being in the EU in response to the need to establish comparable indices of consumer prices so that inflation trends in the EU member states to be used as a criterion for the accession to the European Monetary Union can be measured. There are certain differences between the structure of the consumer basket for the national index of consumer prices of the CR and the structure of the consumer basket for the HICP. The HICP weights include receipts from purchases made in the CR by foreigners and does not include hypothetical rent, whereas the national index of consumer prices includes hypothetical rent and does not include receipts from purchases by foreigners.

Internationally comparable data on the population living under the at-risk-of-poverty threshold (in %) in the years 2005 – 2014 are stated in the table no. 25. The at-risk-of-poverty threshold is represented by 60 % of the median national equivalised household income per consumption unit. The statistical data have been drawn up from the EU-SILC 2005 – 2014 surveys published by EUROSTAT.

All data (with the exception of CPI data) of the year 2015 are preliminary ones, data of National Budget are preliminary ones, data of National Budget are preliminary ones for all years.

Note: data indicated “x” – in this year statistical survey did not exist.

Closure of data – 29th of July 2016

Average Number of Members in Households (Household Budget Survey - CZSO)

¹⁾ Wages and salaries; social contributions from employers.

²⁾ Operational surplus (created by production activities) and mixed income, i.e. the remuneration for work done by the owner or his family members; this is marked as „mixed income“, because it cannot be separated from the entrepreneurial profit of the owner.

³⁾ E.g. interests, dividends, sharecropper.

⁴⁾ E.g. income tax from employment, property, entrepreneurship, lottery wins and bets.

⁵⁾ The difference between current revenues and current expenditures.

⁶⁾ The ratio of gross savings to disposable income of households.

Individual consumption expenditures	111.7	114.1	115.9	111.8	107.8	105.4	105.1	106.6	104.4			
Gross savings	329.3	212.2	110.8	113.2	94.1	98.8	116.4	105.5	104.1			
Gross savings ratio (annual difference) ⁶⁾	4.78	5.63	-0.48	0.14	-1.46	-0.65	1.02	-0.10	0.00			

¹⁾ Wages and salaries; social contributions from employers.

²⁾ Operational surplus (created by production activities) and mixed income, i.e. the remuneration for work done by the owner or his family members; this is marked as „mixed income“, because it cannot be separated from the entrepreneurial profit of the owner.

³⁾ E.g. interests, dividends, sharecropper.

⁴⁾ E.g. income tax from employment, property, entrepreneurship, lottery wins and bets.

⁵⁾ The difference between current revenues and current expenditures.

⁶⁾ The ratio of gross savings to disposable income of households.
